Healthcare Enterprise Resource Planning
Healthcare shifts its focus to the back-office system

The Constellation ShortList™ presents vendors in different categories of the market relevant to early adopters. In addition, products included in this document meet the threshold criteria for this category as determined by Constellation Research.

This Constellation ShortList of vendors for a market category is compiled through conversations with early adopter clients, independent analysis and briefings with vendors and partners.

About Constellation Research
As an award-winning Silicon Valley-based strategic advisory and futurist analyst firm, Constellation Research serves leaders and organizations navigating the challenges of digital strategy, business-model disruption and digital transformation.

Constellation works closely with solution providers, partners, C-suite executives, board of directors, and its Constellation Executive Network of buy-side leaders to lead the way in research coverage and advise clients how to achieve valuable business results.

About This Constellation ShortList™
Enterprise resource planning (ERP) is the backbone for healthcare organizations that are focused on the integrated management of business processes in the areas of accounting/finance, HR and supply chain.

Healthcare’s shift to value-based care has put pressure on hospitals to better understand the true cost of delivering care down to the line-item detail. ERP systems help eliminate data and operating silos because these back-office departments traditionally operate independently. The next big wave in healthcare is to explore how ERP systems will help with operational efficiencies while reducing costs in the organization.
Threshold Criteria
Constellation considers the following criteria for these solutions:

- Chart of accounts
- General ledger accounting
- Accounts receivable
- Accounts payable
- Planning and budgeting
